WHAT IS ACRONIS CYBER PROTECT?

Cyber security has become a necessity. Cybercriminals have become more sophisticated and the threat levels are constantly rising. Legacy security solutions can be clunky and they often leave systems exposed to threats. That's where Acronis Cyber Protect comes in.

Cyber Protect is the only solution that natively integrates cybersecurity, data protection and management to protect endpoints, systems and data.

"WE'RE A SMALL BUSINESS, WE'RE NOT BIG ENOUGH TO BE A TARGET OF CYBERATTACKS"

Unfortunately, cybercriminals often consider small businesses prime targets—established enough to house valuable data or to pay ransoms, but small enough to not have robust cybersecurity measures in place. Instead of paying cybercriminals hefty ransoms, we equip your business with the tools to proactively protect your business from today's advanced threats.

"WITH THE COVID-19 EMERGENCY, IT'S NOT THE RIGHT TIME FOR A PURCHASE / THERE ARE OTHER PRIORITIES"

Machines and data are even more vulnerable than ever with more people working remotely. Working from home means that more personal devices are being used to accomplish work tasks – including machines with outdated operating systems, unsecure router connections, and even systems with outstanding patches and software updates.

To secure your business and your employees, these devices that are accessing your corporate network need to be secured. One way we can help you do this is through our cyber protection offering which includes a secure point-to-site VPN. This ensures that all the traffic accessing your internal networks is secure – helping you achieve a better cybersecurity posture.

WHAT'S INCLUDED IN ACRONIS CYBER PROTECT?

IDENTIFY	PROTECT	DETECT	RESPOND	RECOVER
Auto-discovery of new devices	Remote agent installation	Defenses against malware/ ransomware	Patch management integrated with backup	Backup and disaster recovery
Vulnerability assessments	Bakup and disaster recovery	Hard drive health control	Malware quarantine	Forensic information in backups
