

**ARE YOUR STAFF
TRAINED IN
CYBER SECURITY?**

usecure

 Dataquest

CYBER ATTACKS ARE A GROWING THREAT TO YOUR BUSINESS.

49%

of UK businesses have reported cyber attacks in the last 12 months.

Among those that have identified breaches or attacks, around a quarter experience them at least once a week¹.

In most cases, data breaches are the result of staff accidentally clicking onto or downloading malicious programs. An unaware employee could cost your company time, data, money and more!

In recent times, working from home and staff using their personal devices have made businesses easier targets for cyber criminals. For example, an employee using an unsecured network could result in a serious data breach.

CYBER ATTACKS CAUSED BY HUMAN ERROR

Anti-virus software can only protect your business to a certain point. They don't protect you from attacks as a result of human error, or actions that can expose your company to cyber attacks. For example:

PHISHING

Phishing is when criminals steal your information via email. It accounts for 90% of data breaches². These seemingly innocent emails encourage your staff to click on a malicious link. The link will either request sensitive information from them, or download a virus to gain access to company data.

SPEAR PHISHING

Spear Phishing targets a particular staff member. This is particularly scary as the criminals spend time researching who your staff are, who to target and who they should pretend to be in the email so it looks very convincing.

EDUCATING YOUR STAFF IS KEY

Ensure your workforce is security-savvy, with usecure's security awareness training program. This comprehensive program ensures your staff are aware of the different ways cyber criminals will try to attack, and how they can best handle the situation.

usecure isn't a one-time tutorial for new staff members.

The platform has other features which monitor your company's security on a regular basis; whether it's by simulating phishing emails or searching the web for any leaked email account details.

In short, usecure is a cost effective and user-friendly tool that you can use across your business to identify security gaps, and then close them.

usecure has a variety of features to ensure security for your business and peace of mind:

**ULEARN | AUTOMATED
SECURITY AWARENESS
TRAINING**

Staff training that is tailored to the individual.
Features interactive quizzes and bite-sized videos.

**UBREACH | EMAIL
EXPOSURE CHECKER**

uBreach searches online and reports back to you
with any exposed company email account details.

**UPHISH | AUTOMATED
PHISHING SIMULATION
SOFTWARE**

Simulate phishing emails to test how susceptible
your staff are. Monitor their reactions over time.

**UPOLICY | SIMPLIFIED
POLICY MANAGEMENT**

Keep your staff up to date with your company
security policies, and check they've signed them.
